### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Yamaguchi et al, U.S. Patent No. 6,444,771, discloses an acrylic acid-maleic acid copolymer that has a weight-average molecular weight of 2,000-50,000, and a calcium ion scavengeability of 400 mg  $\text{CaCO}_3$  per gram or more (see abstract and col. 3, lines 5-13). It is further taught by Yamaguchi et al that suitable polymerization initiators include hydrogen peroxide and ammonium persulfate (see col. 7, lines 16-30), that the addition of the hydrogen peroxide is completed at least 10 minutes earlier than the addition of the monomer component (see col. 7, lines 31-40), and that the polymers are used in detergent compositions (see col. 8, lines 54-67). However, patentee differs from applicant in that Yamaguchi et al does not teach or suggest in general a production process for a low-molecular weight (meth)acrylic acid (salt)-based polymer that contains 100 to 95 mol % of a monoethylenically unsaturated monocarboxylic acid (salt) monomer that is added to the reaction system by drop-wise addition, as required by applicant in the instant claims. Furthermore, applicant's 1.132 Declaration has shown that the copolymers in Examples 1-1 to 1-5 of Yamaguchi et al do not exhibit a clay dispersibility in high-hardness water of 0.47 to 0.60, as required in the instant claims.

Accordingly, the claims viewed as a whole would not have been obvious to one of ordinary skill in the art at the time of the invention after viewing the prior art of record.
